The multidisciplinary partner system

The insurance market is subject to constant change. The customer demands are increasing, the company processes are becoming more complex. The topic of big data is coming into focus again and again. The amount of data that must be managed is increasing. But the functions of old systems are often no longer sufficient. In order to remain successful in the long run, an intelligent system that can satisfy the current and future requirements is indispensable.

With a complete 360-degree view of your customers, in|sure Partner offers you a complete solution that provides optimal support during your processing procedures.

Use in|sure Partner according to your own needs: as an independent partner system in an existing IT system landscape, as a central company application or in combination with other components from the in|sure product family.

in|sure Partner

is a division-independent partner system for insurance companies to maintain and save customer data (policyholders, insured people, premium payers, etc.) with their respective reference to the actuarial applications..

The features

In contrast to historically grown partner systems, in|sure Partner is based on a consistent partner and role concept. The system will be completely connected to your actuarial applications and thereby permits a holistic view of your customers. From creation to the change and query up to the deletion of blocking of personal data compliant with data protection regulations, in|sure Partner offers complete data management.

Functions:

+ Creation of personal data from legal and natural people

+ Creation of communication connections to the customer

+ Illustration of possible bank accounts with primary intended purposes (collection/disbursement)

+ Illustration of partner roles that are maintained through the division/policy/claims system

+ Illustration of relationships between partners without actuarial dependencies

+ Maintenance of customer contacts (letter, telephone, etc.)

+ SEPA mandates both as a framework and individual mandate

Furthermore, in|sure Partner also offers:

+ Uniform view of the customers (360-degree view)

+ Search through different combinations of saved data (also wildcards or phonetic similarity)

+ Duplicate checking, merging and separation without integration of technical systems (for example, inventory management)

+ Inspection and completion of mailing addresses and bank data (existing solutions can be connected, for example, Uniserv, adressware, Datafactory Streetcode, etc.)

The advantages

in|sure Partner is not just a link between divisional systems, but rather also for the collection/disbursement as well as output/input management. All data can be entered, displayed and changed through a user-friendly interface. in|sure Partner supports users with clear dialogs and process steps. Thanks to the service-oriented architecture as well as the concept of the flexible interface adapter, you have countless possibilities for integrating in|sure Partner into your existing system landscape. Both synchronous and asynchronous processes from any peripheral systems can be easily connected. In a heterogenous environment, companies can operate online and batch interfaces parallel to each other. in|sure Partner is also suitable for application worlds that are undergoing a process of structural change. In particular movements in the valueadded chain and/or completely new process requirements are made possible through this.

Cross-Selling potential

Through the holistic view of your customers, you can detect their needs early on and take corresponding action.

Data security

In particular critical information or information particular to the division can be illustrated outside of the system without showing individual customer amendments in the partner system and thereby overloading the actual partner system.

Connected

The partner administration allows the connection of different departments, an automatic updating of datasets to the current status and therefore synergies in case processing.

Consistent

Simultaneously, our software offers consist personal data beyond all divisions with a possible use of existing test systems

Independent

in|sure Partner is not dependent on the other products from the in|sure family, but rather can also be used as an independent component in your company.

Holistic

in|sure Partner allows the central and complete execution of changes (also in the future) for the entire company and all divisions. Your consultant does not have to wait until the change date has been reached, but rather can submit the change for the future.

360-degree view

in|sure Partner offers a 360-degree view of your customers. This allows you to quickly access information regarding the role the customer plays for your company or which roles (for example, policyholder, insured person, premium payer) the customer takes on. You also have the possibility to continue further processing from in|sure Partner related to the context of the respective application (for example, in the respective policy or claims system).
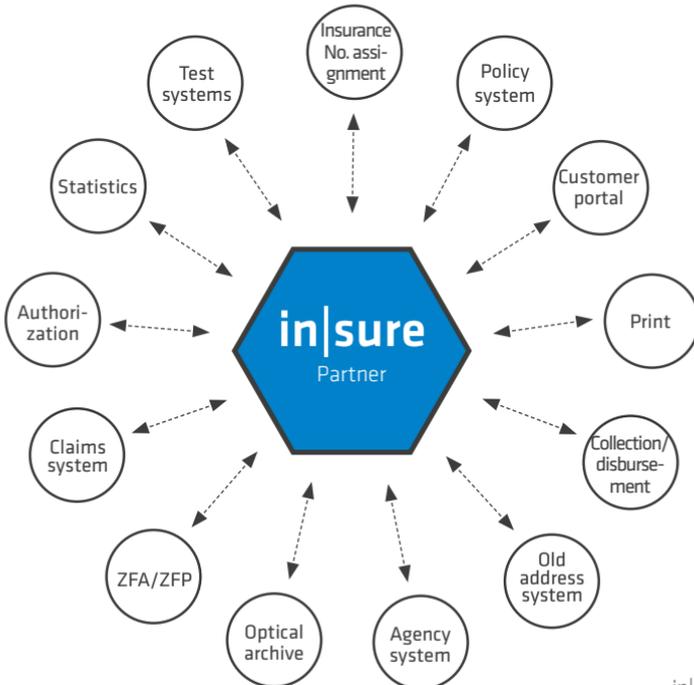

The technology

Just like all products from the in|sure family, we continue to develop in-|sure Partner constantly in order to provide you have a product that is always state of the art. All in|sure products are based on the same framework.

in|sure Partner is a multi-layer, scalable web application with an open source framework. The system is based on future-proof Java technology and is completely ready for release.

✚   JSF / AJAX for the presentation layer

✚   JEE components for technical logic

✚   Persistence layer with JPA / Hibernate

✚   Relational DBMS: Oracle, DB/2, etc.

✚   Portability in cloud technology

Interfaces:

✚   Service-oriented interfaces

✚   EJB Session Beans

✚   Interfaces to determine technical logic / adapter concept

The extra

Within the scope of our partnership forums, we offer you the possibility to actively cooperate in the enhancement of our products in agreement with user needs.

This has other advantages:

+ faster provision of new features

+ inexpensive development through cost sharing

+ secure identification and implementation of industry-wide requirements (for example, regulatory changes)

With the decision for in|sure Partner, we guarantee you our complete support during integration. This, of course, includes the migration of your existing data. You decide if the migration should be performed on demand or through a different strategy. With a team of experienced developers, consultants and insurance experts, we perform the change process together with you on site. This ensures a smooth integration of your new partner system and makes it easier to begin using in|sure Partner on a daily basis.
